

CLOUD AUTOMATION · DATA INFRASTRUCTURE · TECHNICAL MANAGEMENT

Fourteen years in banking, now focused on data and automation.

My background covers operations, markets, treasury, risk, and portfolio analytics. At KeyBank, I use Python, BigQuery, and SQL to improve recurring risk reporting and regulated processes.

I have worked in banking for 14 years. I started in FX settlement, where I managed approximately 25 staff, and later led a six-person equity-derivatives product-control team. I then moved into liquidity management, non-trading market risk, and Business Banking portfolio analytics.

At Citi, I led a SWIFT migration that delivered approximately \$29M in annual savings and executed approximately \$10B in balance-sheet optimization during the 2023 regional banking crisis. I also built Power BI and KNIME reporting for derivatives, developed the Treasury Management Notebook, and automated cash-rebalancing workflows.

Today, I am Vice President, Business Banking Portfolio Analytics at KeyBank. I engineered a Python commentary pipeline using Vertex notebooks and BigQuery, managed a 402 GB SQL query footprint across 36 months of balance ledger history, and resolved a backlog of delayed Regulation B notices through a systems-level process change. The role combines technical delivery with portfolio risk work, procedures, controls, and implementation.

I tend to work on problems that need both analysis and implementation. I clarify the business decision, build or improve the data process, and help define the procedures, controls, ownership, and monitoring around it.

My background is in banking. The same skills are useful in other large organizations that need reliable data pipelines, recurring financial and risk reporting, governed automation, and coordination across finance, risk, operations, and technology.

I am looking for roles that combine technical management, cloud automation, financial analytics, and operating leadership. The best fit would involve building reliable data processes and working closely with the teams that use them.

Robert Perry Morris

Vice President, Business Banking Portfolio Analytics · Portfolio Management & Risk Strategy | Business Banking

Vice President, Business Banking Portfolio Analytics

Fourteen years across banking operations, markets, treasury, risk, and portfolio analytics, with current work in Python automation, BigQuery, SQL data infrastructure, and Regulation B process execution.

CAPABILITIES

Analytics & Technology

Python, SQL, Power BI, Tableau, KNIME, Generative AI, Salesforce, Automation

Portfolio & Credit Risk

Portfolio Strategy, Credit Risk Analytics, Line Management, Vintage Analysis, Collections Strategy, Portfolio Monitoring, Adverse Action / Reg B, Credit Line Increase Strategy, Revolving Line-to-Term Strategy

Governance & Execution

Risk Governance, Control Design, Process Transformation, Cross-Functional Leadership, Procedure / Operating Model Design, Stakeholder Management

Banking & Markets

Liquidity Management, Balance Sheet Strategy, FX / SWIFT, Equity Derivatives, Product Control, LCR / NSFR, CCAR, 2052a

EXPERIENCE

2025 - Present

Vice President, Business Banking Portfolio Analytics

Portfolio Management & Risk Strategy | Business Banking

KeyBank

- Engineered a Python-based automated data commentary pipeline utilizing Vertex notebooks and BigQuery to streamline month-over-month and quarter-over-quarter risk metric reporting.
- Optimized data engineering frameworks by managing a 402 GB SQL query footprint to scan 36 consecutive months of historical balance ledger data across a large portfolio.
- Executed a systems-level process transformation to resolve a corporate backlog of delayed Regulation B adverse action notices for frozen revolving lines of credit.

2024

VP, Non-Trading Market Risk Solutions

Citibank

Worked in a Chief of Staff capacity across Treasury, Finance, Risk, and Technology. Developed the Treasury Management Notebook and automated cash-rebalancing workflows.

2021 - 2024

VP, Liquidity Management

Citibank

Executed approximately \$10B in balance-sheet optimization during the 2023 regional banking crisis, improving LCR and NSFR positioning. Also supported forecasting, stress, and CCAR work.

2019 - 2021

AVP, Equity Derivatives Product Control

Citibank

Held daily P&L and product-control responsibility for index and sector derivatives, led a six-person team, and built Power BI and KNIME reporting.

2012 - 2019

AVP, Foreign Exchange Trade Processing

Citibank

Led approximately 25 staff across global FX settlement and a direct SWIFT migration that delivered approximately \$29M in annual savings.

LEADERSHIP

Citi Buffalo Pride

Co-founded and grew Citi Buffalo's Pride employee network to more than 300 active members.

Practical AI & Automation

Developed practical generative-AI and automation use cases for banking workflows, with a focus on reducing manual work and improving how teams analyze and communicate information.

Training & Enablement

Designed and facilitated 25+ cross-functional workshops across Citi Buffalo, translating technical and operational topics into practical tools teams could use.
